Helping practices and patients from prescription through treatment with Acthar

Prescribing H.P. Acthar® Gel (repository corticotropin injection) for patients is important to the treatment plan, but it can take time to work through an insurance company’s requirements for approval.

Mallinckrodt understands the importance of patients receiving treatment in a timely manner and is committed to providing support and guidance during the process. The Acthar support team includes the Sales Specialist, the Access & Reimbursement Manager, and a dedicated Case Manager at the Acthar Hub, a no-cost resource for patients and healthcare professionals.

Let the Acthar support team help every step of the way by:

- Determining patient coverage
- Managing insurance requirements for coverage
- Finding financial assistance options

H.P. Acthar® Gel
(repository corticotropin injection) 80 U/mL
Steps to take when prescribing Acthar:

- Fax the Acthar Start Form to the Hub. If you prescribe directly through a Specialty Pharmacy, also fax the Acthar Start Form to the Hub so that the patient can receive all Hub services.
- Encourage patient to sign the Acthar Start Form to be eligible for other support services.
- Advise patient about injection training. If patient or care partner would like to receive injection training, initial the request on the Acthar Start Form or request training through Case Manager.
- The Case Manager will contact the office if additional paperwork is necessary.
- Inform patient that the Case Manager and Specialty Pharmacy will contact them by phone via an 800 number, which may appear as “blocked” or “unavailable.” Remind patients to call back to keep the approval process moving forward.

Your ARM will be there to support you throughout the reimbursement process. Contact the Acthar Hub at 1-888-435-2284 for additional assistance.
